

Nonprofits - Overview

Who We Are

We are a platform for people with skills and ideas and we are here to provide resources required to design, iterate and scale solutions that tackle critical problems for communities in South and Southeast Asia.

Our Focus Areas

We aim to support nonprofits that are working to build solutions in the following areas: Healthcare, Education, Social Welfare, and Human Rights. To learn more about what our goals are in these areas, please visit our [website](#).

Our Model

We support individuals and teams to build and validate their models and assumptions in the early stages of development. We work directly with teams to understand their needs and provide funding and, as needed, advisory services to help design, test, validate and scale solutions and underlying delivery models. We define scale as the intention and ability to include all the people that face a problem or need in the specific community, area, country or region for which the solution is designed.

What We Look For

We support mission driven individuals and teams able to design and refine solutions that work. We look for talented and adaptable individuals, teams and organizations with strong critical and strategic thinking skills and commitment to the communities they are working with and for.

How We Partner

We focus on creating long-term partnerships to achieve a shared mission by providing strategic, operational, and financial support, as well as access to our networks. How we provide these resources depends on the stage of your organization:

- **Idea Stage:** *advisory services to help design and iterate a mission, activities and business model*
- **Creation stage:** *financial support and advice to pilot and prove a solution*
- **Validation Stage:** *funding, and need based advisory services*

Our Funding

For nonprofits, we provide multiple forms of grants based on the stage of our partnership. These include \$50k USD start-up restricted grants, outcomes based unrestricted grants and larger unrestricted, multi-year partnership grants.

Our funding is flexible and patient through links to strategic milestones and transparent terms that are designed to support, rather than burden management teams. Our main focus is on the impact organizations can have on communities across South and Southeast Asia.
